Back-end: Node.js, Express.js, Webpack, Babel, WordPress, Netlify, Heroku

Tools: Git/GitHub, Chrome DevTools, Figma, Fiddler, Excel, TortoiseSVN, Jira, Agile/Scrum

RELEVANT EXPERIENCE

InvestCloud, Inc. | Front-End Developer

May 2021–Present

Global tech company aiming to modernize financial technology

- Build full-stack financial technology apps in an **Agile** environment using **HTML/CSS**, proprietary software, and internal APIs
- Utilize technical problem-solving to identify workarounds and long-term solutions to limitations of proprietary software
- Ensure all development supports mobile, dark mode, accessibility, and cross-browser capabilities
- Collaborate with colleagues to organize the mentoring of junior developers in best practices of software and productivity

SOFTWARE APPLICATIONS

INT Magazine | intmagazine.com

Online magazine highlighting creative themes and topics

- Built site using **PHP** with **Sass** and **WordPress** to ensure independent client utilization following development
- Maintained communication with client to discuss expectations of design, payment, and timeline
- Designed website using **Figma** to receive client feedback and approval prior to development phase

Professional Website | molfuh.dev

Digital portfolio designed to showcase own software engineering projects

- Independently designed, built, and released professional website using **React** with **React styled-components**
- Launched site with **Google Domains** in conjunction with **Netlify** to streamline releases with new changes
- Utilized **NPM packages** to efficiently display modern web effects to actively improve user experience

Positively TEDIOUS | positivelytedious.com

Portfolio website for new musician TEDIOUS to showcase important artist information (includes hidden surprise behind logo)

- Created an interactive and dynamic one-page web application using **React** to achieve artist's vision and requests
- Leveraged **Sass** preprocessor to optimize clean code base, separating CSS into separate sheets based on function and purpose
- Utilized **CSS animations** with **keyframes** to present a unique and seamless user experience across all devices

Meditative Musical Drum | meditativemusicaldrum.netlify.com

Minimum viable product for phone app to create self-designed meditative music (mobile only)

- Created a touch-responsive musical drum using **React Native** to allow for touch to emulate a realistic musical experience
- Ensured clean and readable code by utilizing **React Hooks** and **JSX** throughout the application
- Built with **Expo** to establish long-term goal of functionality for browser and Apple/Android app compatibility
